

special COMMISSIONS

Current trends are placing more demands on suppliers of street furniture to develop new and distinctive products, enhancing the appearance of the built environment and providing a real sense of location.

Furnitubes' design team were sensitive to conservation when asked to extend the existing railings along Eastbourne seafront. The post & rail pictured here is an exact replica of the unusual cast aluminium original.

▲ Replica Cast-Aluminium Railings

▲ Decorative Steel Railings

While the main function of guardrail is to protect the public from the highway, many systems can be adapted to either incorporate access gates (see page 142) or tailored for wall-top installation, as shown here.

SPECIAL SITES

The Linx Railing was adapted to replace the existing railings at Brighton Marina. Trafford capped posts were supplied with a bolt-down plate to fix to the existing foundations.

The Romney Guardrail installed at St Georges Wharf, Vauxhall, has been adapted to incorporate timber handrails to create an attractive contrast between natural timber and painted steel.

CAST IRON BOLLARDS AS RAILING POSTS

Furnitubes' design team have researched new uses for traditional cast iron bollards, and the flexibility of our standard products means that it is possible to adapt items in a way which most readily suits the requirements of our clients.

Right, a standard Holborn bollard has been adapted to accept two rail posts. This versatility permits a uniform appearance with other items of street furniture and with existing bollards. Standard cast iron bollards can be adapted to act as barriers, railings, fencing and gate posts.

installed at Bessborough Gardens, Vauxhall, London

◀ **EDINBURGH Bollard**
as railing post (special commission)

Railings can also be designed to work in conjunction with many of Furnitubes' products. Here a Linx 100 panel fits seamlessly into a Bell Traffic Bollard. The Bell protects the post from damage and the post provides increased visibility and safety.

(see Bollards section)

▲ **BELSIZE Bollard**
as railing post

Many of these items are exclusive to Furnitubes International, such as the Belsize whose design was taken from an original Victorian bollard at Belsize Park in Hampstead. Furnitubes' pattern makers skillfully produced a faithful copy which was then cast and adapted to take a circular section rail.

For the complete range of bollards that complement or can be adapted for post & rail applications please refer to the Bollards section.
