WESTMINSTER CITY COUNCIL

Furnitubes manufactured fingerposts for Westminster City Council. These elegant posts reinforce corporate identity since they are cast with the City of Westminster crest and are manufactured with special size arms.

The fingerposts, unique to the City of Westminster, can be seen at many high profile locations throughout London including Buckingham Palace, Marble Arch, Bond Street and Victoria.

TUNBRIDGEWELLS BOROUGH COUNCIL

Furnitubes worked in conjunction with Royal Tunbridge Wells Borough Council to improve signage and security in the town centre. The basis of the fingerpost design was an elegant leaf form, inspired by an existing Victorian lamp column. Furnitubes' design team sympathetically updated the detail from the original post, taking care to acknowledge influences from both past and present.

As part of the council's commitment to provide CCTV cameras within the town centre, Furnitubes were approached to design a CCTV column that was attractive but would also house and provide access to all the electronics vital to the operation of the cameras. The classical design pictured satisfies both these criteria, blending in well with the variety of architecture within the town centre.
