

Root fixing is the most popular method of installation.

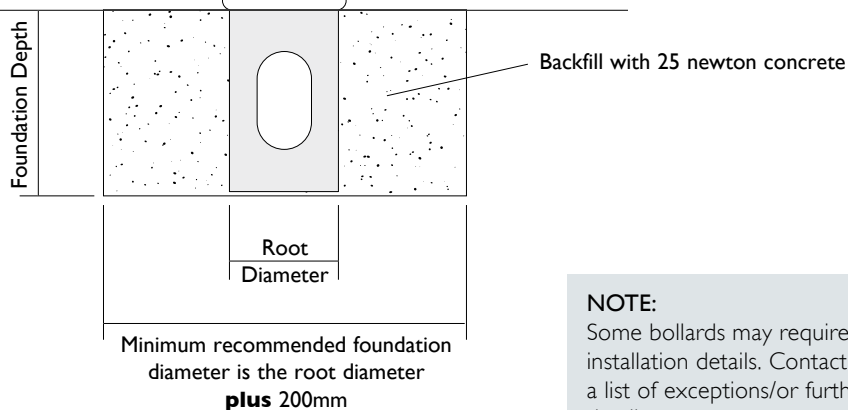

This method provides the installed item with a strong foundation, but can make replacement difficult, should it be damaged.

If the product needs regularly replacing or moving, a bolt down fixing or removable socket may be more suitable.

Regent Pie Crust MK.2 Bollard,
REG 524 (see page 13 for details)

Foundation depth is usually the same as the root depth of the bollard. This dimension can be obtained from the bollards section of this brochure.

NOTE:
Some bollards may require special installation details. Contact Funitubes for a list of exceptions/or further technical details.
